

ATTENTION: LOAD MANAGEMENT CUSTOMERS

Load Management customers who are on the Air Conditioning cycle control program should remember to pre-cool their house ahead of time if they know the weather will be hot. This will help keep the house cool rather than turning the AC on when the utility is cycling, which in turn will make it harder to cool the house down. Remember that the fan for the air conditioner keeps running when the compressor unit is turned off. This helps to circulate the cool air in the house when the AC is being controlled.

Load Management customers who are on the Water Heater cycle control program also remember if possible to do laundry and take showers early in the morning or later at night during hot weather this summer.

Thank You, Management

P.S. If you have any questions please call us at 352-6538!!
