

WANTED LOAD MANAGEMENT CUSTOMERS

To Whom It May Concern,

As your utility company we are striving to keep your electric rate as low as possible. One way we have been able to do this is with our Load Management's water heater, air conditioning, and heating program. This program was implemented back in 1985 and has been keeping our electrical rate as low as possible. But as you might have known our community, including our industrial and residential customers, has taken a big leap forward over the years. Due to this our electrical power consumption usage has also taken a sizeable increase.

To help defray this increase we are asking you as a customer of the Sauk Centre Public Utilities Commission to consider signing up for our LOAD MANAGEMENT PROGRAM. If you have an electric hot water heater, central air conditioning, heat pump, and/or boiler unit you can be a big part in keeping your electric rate as low as possible!!

Please contact our office for more information on how the program works and how to get involved with our Load Management Program. Call 352-6538.

There is no cost to the customer for this program. In some instances there will be a special reduced rate.

Thank you for your consideration.
